**All Weather Insulated Panels Set to Expand East Coast Presence with  
New Pennsylvania Manufacturing Facility**

*Open House Event to Celebrate Opening of New Continuous Line Production Plant*

EAST STROUDSBURG, PA (September 8, 2022) – [All Weather Insulated Panels \(AWIP\)](#) will debut its new continuous line production plant in East Stroudsburg, Penn., with an open house event on Sept. 15.

The newly renovated state-of-the-art facility is AWIP’s first on the east coast, in addition to an existing presence in both Vacaville, Calif., and Little Rock, Ark. The company’s expanded market presence will help to add more than 70 local jobs, address supply chain concerns in the construction sector and contribute to the overall economy of the northeast region.

To celebrate the opening of its newest continuous line production plant, AWIP will be hosting an [open house and tree planting event](#) at the facility on Sept. 15. All Weather Insulated Panels president Natalia Rizzatti will provide opening remarks to kick off the event.

“At All Weather Insulated Panels, we put the needs of the customer above all else, whether that’s the performance of our product, sustainability goals or technical support,” said Rizzatti. “With the opening of our new plant in East Stroudsburg, we are better equipped to service our east coast customers with enhanced production capabilities and service.”

The new continuous line production represents one of the most innovative lines of insulated metal panel (IMP) production in the world. An efficient eight-step process from coil to carrier – with edge detailing, foam laydown, cooling and more in between – AWIP’s state-of-the-art process delivers high performance insulated metal wall and roof systems.

The facility enables AWIP to showcase to clients and potential customers the panels both in production and in their final installed condition. AWIP partnered with IRONDELTA for the demolition of the existing wall system and the subsequent re-clad using IMPs manufactured at the plant. IRONDELTA ensured the install demonstrated a correctly installed IMP system with a stacked panel design.
